Tarea: Construcción Colectiva ASUM-DM

Ir al link
http://gforge.icesi.edu.co/

luego entrar al link ASUM-DM Methodology. En el panel izquierdo, al hacer click en Expandir
(+) ASUM-DM, aparece un primer nivel de desglose, con:

+ Analyze-Design-Configure&Build
+ Deploy
+ Operate & Optimize

Al expandir cada uno de ellos, aparece un segundo nivel de desglose, totalizando 25 pasos.

1. En grupos (según el tamaño del grupo*), dividirse los pasos en orden, analizarlos, interpretarlos y sintetizarlos (filtrar detalles irrelevantes) en PPT (**máximo 1 slide por paso, no mucho texto**).
2. Nombrar el archivo PPT con el grupo y rango de los pasos respectivos (e.g., Grupo2-Pasos6-10.pptx).
3. Cada grupo debe subir el archivo al link de la tarea en Intu/Moodle, y enviarlo a
   - gtamura@icesi.edu.co
4. Exponer los pasos (en el orden de ASUM). El tiempo que tienen disponible entre todos, es alrededor de 2h40min. Por ejemplo, si son 5 grupos, cada grupo tendrá unos 32 minutos para presentar sus pasos.

Processes

- ASUM-DM
  - Analyze-Design-Configure&Build
    - Prepare for Implementation
    - Conduct Readiness Assessment
    - Conduct Project Kick-off
    - Understand Business
    - Understand Data
    - Design and Validate Infrastructure
    - Set up Environments
    - Prepare Data
    - Build Model
    - Evaluate Model
    - Conduct Analytical Knowledge Transfer
    - Define Deployment Approach
    - Design Operational Testing Strategy
    - Validate and Test in QA Environment
  - Deploy
    - Conduct Operational Knowledge Transfer
    - Prepare for Ongoing Maintenance
    - Deploy Solution
    - Transit to IBM Support
    - Launch
    - Prepare for Project Closure
  - Operate & Optimize
    - Monitor Model
    - Operate, Optimize and Imrove System
    - Support User Community
    - Manage Infrastructure
    - Govern System Lifecycle Program
- Project Management

ASUM-DM

Delivery Process: ASUM-DM

An iterative IBM SPSS Process to implement a Data Mining/Predictive Analytics project based on an extended and refined CRISP-DM methodology (click the "Description" tab below for more details) .

IBM Analytics methodology "Analytics Solutions Unified Method (ASUM)" has five phases: Analyze, Design, Configure & Build, Deploy, and Operate & Optimize. However, the three phases of ASUM of Anlyze, Design, and Configure & Build have been combined here due to the iterative nature of data mining/predictive analytics projects.

The method Work Breakdown Structure (WBS) already incorporates adequate project management elements but an additional optional Project Management Process has been added here for supplemental use when needed.

Description

CRISP-DM was conceived in 1996 and was first published in 1999. It was reported as the leading methodology used by Data Miners in polls conducted in 2002, 2004, and 2007. There was a plan between 2006 and 2008 to update CRISP-DM but that update did not take place and today the original CRISP-DM.org website is no longer active.

ASUM-DM is an extended and refined CRISP-DM for Data Mining/Predictive Analytics projects. CRISP-DM analytics' activities/tasks and data mining cycle (graph below) have been retained and accepted entirely but beefed up in the "Deployment" phase where CRISP-DM is at one of its weak points. Additionally Infrastructure/Operations and Project Management activities/tasks have been added and the method has been augmented by some rich and useful templates and guidelines. (See Project Lifecycle/Sitemap opposite for ASUM-DM activities)

TU FUTURO A OTRO NIVEL

Grupos para la Tarea: ASUM-DM

Tareas por Subgrupos – Construcción Colectiva ASUM

Grupo 1:	Juan Bautista, Johan Bonilla, Andres Cano, Laura Chaparro, Ricardo Chicangana
1	Prepare for Implementation
2	Conduct Readiness Assessment
3	Conduct Project Kick-off
4	Understand Business
5	Understand Data
Grupo 2:	Josue Cobaleda, Daniel Garcia, Edwin Gomez, Manuel Gonzalez, Felipe Guerra
6	Design and Validate Infrastructure
7	Set up Environments
8	Prepare Data
9	Build Model
10	Evaluate Model
Grupo 3:	Juan Hurtado, Lina Mendez, Andres Meneses, Ivan Moran, Sandra Orozco
11	Conduct Analytical Knowledge Transfer
12	Define Deployment Approach
13	Design Operational Testing Strategy
14	Validate and Test in QA Environment
15	Conduct Operational Knowledge Transfer
Grupo 4:	Fabian Ortiz, Jhonattan Reales, Willian Reina, Farid Sandoval
16	Prepare for Ongoing Maintenance
17	Deploy Solution
18	Transit to Support
19	Launch
20	Prepare for Project Closure
Grupo 5:	Mavelyn Sterling, Julian Tabares, Andres Velasquez, Erik Vergara
21	Monitor Model
22	Operate Optimize and Improve System
23	Support User Community
24	Manage Infrastructure
25	Govern System Lifecycle Program
